

## **MTN Nigeria Launches 4G+ ...offers superior customer experience**

**Lagos | Nigeria: Tuesday, June 25th 2019.**

MTN Nigeria Communications Plc has launched 4G+ in Lagos, Abuja, and Port-Harcourt. The enhanced service is aimed at delivering a premium experience to more people across the country.

MTN 4G+ runs on 4G LTE Advanced Technology using a combination of the recently acquired 800 MHz spectrum and 2600 MHz. The added spectrum and advanced technology extend the reach and capacity of MTN's data network in Nigeria and enables speeds of up to 200 Mbps. This means a 30-minute HD video could take as little as three minutes to download on 4G+, while the same video would take around eight minutes to download on standard 4G.

The service is immediately available and will deliver much higher broadband speeds, a more consistent connection and significant improvement in indoor coverage. With this enhancement, our customers in covered locations can expect faster downloads and uploads, and better browsing and streaming experiences.

A handwritten signature in blue ink, appearing to read "Ufo Ukpanah", is positioned above the printed name.
